<b>Coding Challenges</b>			
<b>Problem Statement:</b> 1. Write a program that will read a sequence of positive real numbers entered by the user and will print the same numbers in sorted order from smallest to largest. The user will input a zero to mark the end of the input. Assume that at most 100 positive numbers will be entered.

## Online coding:

1. Write a program that will read a sequence of positive real numbers entered by the user and will print the same numbers in sorted order from smallest to largest. The user will input a zero to mark the end of the input. Assume that at most 100 positive numbers will be entered.

```
import java.util.*;

public class Main{

    public static void main(String[] args) {

        Scanner sc= new Scanner(System.in);

        double[] numbers;

        int numCt;

        double num;

        numbers = new double[100];

        numCt = 0;

        System. out. println("Enter up to 100 positive numbers; Enter 0 to end");

        while (true) {

            System. out. println("? ");

            num = sc.nextInt();

            if (num <= 0)

                break;

            numbers[numCt] = num;

            numCt++;

        }

    }

}
```

```
}
```

```
selectionSort(numbers, numCt);
```

```
System. out. println("\nYour numbers in sorted order are:\n");
```

```
for (int i = 0; i < numCt; i++) {
```

```
    System. out. println( numbers[i] );
```

```
}
```

```
}
```

```
static void selectionSort(double[] A, int count) {
```

```
    for ( int lastPlace = count - 1; lastPlace > 0; lastPlace-- ) {
```

```
        int maxLoc = 0;
```

```
        for (int j = 1; j <= lastPlace; j++) {
```

```
            if (A[j] > A[maxLoc]) {
```

```
                maxLoc = j;
```

```
            }
```

```
        }
```

```
        double temp = A[maxLoc];
```

```
        A[maxLoc] = A[lastPlace];
```

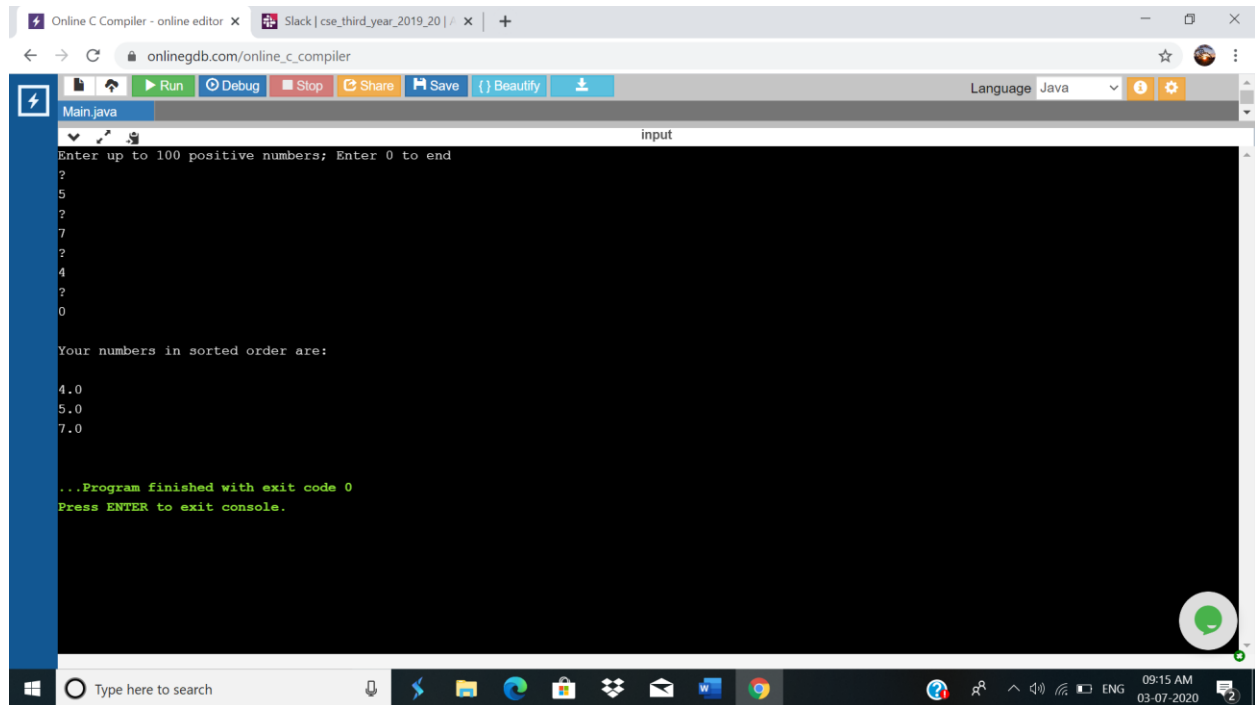

```
        A[lastPlace] = temp;
```

```
    }
```

```
}
```

}

## Output:

The screenshot shows a web browser window with the URL `onlinegdb.com/online_c_compiler`. The browser's address bar and tabs are visible at the top. Below the browser window is a Windows taskbar with various application icons and a system clock showing 09:15 AM on 03-07-2020.

The online compiler interface has a top toolbar with buttons for Run, Debug, Stop, Share, Save, and Beautify. The language is set to Java. The main editor area shows a file named `Main.java`. Below the editor is a console window titled `input` which displays the following text:

```
Enter up to 100 positive numbers; Enter 0 to end
?
5
?
7
?
4
?
0
Your numbers in sorted order are:
4.0
5.0
7.0

...Program finished with exit code 0
Press ENTER to exit console.
```
